ATTN: <input type="text"/>					
Subj: <input type="text"/> Filar and Goniometer Eyepieces for Dynazooms					
<p>In answer to your question of last week we have determined that we will not have a need to use both the Filar and Goniometer Eyepieces in the Dynazoom Microstereoscopes at the same time. It is important, however, that both the Dynazoom lens tubes accept either of these items in order for the P.I. to use the Filar or the Goniometer in either the right or left tube. In certain instances it may be desirable to use two Filars--one for X and one for Y measurements--to avoid rotating. Should you have any further questions please contact me on</p> <p><input type="text"/></p> <p><input type="text"/></p>
